Alabama State Department of Education, Dr. Eric G. Mackey, State Superintendent of Education

The Alabama State Board of Education and the Alabama State Department of Education do not discriminate on the basis of race, color, disability, sex, religion, national origin, or age in its programs, activities, or employment and provide equal access to the Boy Scouts and other designated youth groups. The following person is responsible for handling inquiries regarding the non-discrimination policies: Title IX Coordinator, Alabama State Department of Education, P.O. Box 302101, Montgomery, AL 36130- 2101, telephone (334) 694-4746.

Revised: September 2022
Aquaculture CDE

Aquaculture Career Development Event

PURPOSE

The Aquaculture Career Development Event allows students to compete in various activities involved in the aquaculture industry. Aquaculture is one of the fastest growing sectors of agriculture. Through this event students will have an opportunity to participate in completing tasks integral to most aquaculture operations. The aquaculture CDE consists of several tasks completed on a daily basis at aquaculture farms. Tasks include water quality testing, weighing fish and determining feed amounts, identification of common species and also a written exam covering basic principles.

ELIGIBILITY AND REGULATIONS

- For specific Eligibility Rules and Regulations, refer to the Contests and Awards Booklet.
- Only district eliminations will be held prior to the state event.
- The top four winners in the North, Central and South districts will compete in the state finals.
- The team will consist of a maximum of four FFA members, grades 7-12. The team's total score will be based on the sum of the points earned by the three highest scoring participants on the team.
- If a cell phone or smart watch is seen or heard in the possession of a competitor, that individual student will be disqualified from competition and receive a score of zero.
- Competitors must enter their **first and last name as well as their chapter number and name** on the scorecard or they will receive a score of zero. Judges will not attempt to figure out who the card belongs to.

DISCLAIMER

In the event that contests (CDE, LDE, TDE's) cannot be held in person, a virtual option may be conducted. Contest rules and guidelines are subject to change to meet the needs of a virtual experience.

DRESS CODE

Participants must wear closed toed shoes/boots (no sandals, crocs or slides) and long pants (jeans with no holes/ khakis/dress pants) or skirts that cover the knees if not in official dress. Leggings, jogging pants, yoga, lycra, are not permitted. Shirts should be long enough to be tucked in (no crop tops or midriff showing) and not contain vulgar or suggestive material or language. Contest where oral reasons are given should respect the professionalism of the event, and dress aligning with the profession is preferred. Official FFA Dress is an allowable form of dress for all events. **Consequences for not being in dress code will be a 25 % deduction in scores**

ALTERNATE POLICY

For district level events, if a chapter brings alternates there will be no more than two alternates allowed per team. Alternates will use a copy of the scan form (not an original) for those events scored via judgingcard.com. If more than four official scan forms are turned in for a chapter in one event, the highest score(s) for that team will be disqualified and deleted until the chapter only has four team members in the scoring system. Alternates must not be in groups with official team members.

For state level events, alternates are not allowed.

AWARDS/SPONSOR(S)

Refer to Alabama FFA Contests and Awards Booklet at:

http://www.alabamaffa.org/forms_applications.htm

District Event Scoring Procedure and Format

Event Phases	Total Possible Team Points	Percentage of total score
Written Exam	100 (x3)	40%
Species Identification	100 (x3)	40%
Fish Anatomy	50 (x3)	20%
Individual Total	250 (x3)	100%
Team Total	750	
(x#) indicates number of scores counted per chapter team		

State Event Scoring Procedures and Format

Event Phases	Total Possible Team Points	Percentage of total score
Written Exam	200 (x3)	30%
Species Identification	200 (x3)	30%
Fish Anatomy	50 (x3)	8%
Water Testing	100 (x3)	15%
Solution Concentrations	50 (x3)	8%
Feed Ratio	50 (x3)	8%
Individual Total	650	
TEAM TOTAL	1950	100%
(x#) indicates number of scores counted per chapter team		

- 1. Written Exam (District and State):** A 25 question exam at the district and a 50-question exam at the state contest will be administered to each individual. 50 minutes will be allowed for the written exam at the state contest and 25 minutes for the district exam. Each exam question is worth 4 points. Follow the link provided below to a list of modules that can be used as study materials for this exam. Related resources that pertain to the course of study content standards in aquaculture science and aquatic biology can also be used as references (links are below). TEST BANK is available at the Alabama FFA Web site under contest tab.

 - [Water Quality in Aquaculture – Freshwater Aquaculture \(extension.org\)](http://www.alabamaffa.org/extension/water-quality-in-aquaculture-freshwater-aquaculture)
- 2. Species Identification (District and State):** This is an individual event where each participant will be tested on species that are selected randomly from a list of 60 species that are provided in this handbook. The district event will have 20 species while the state event will have 40 species. 20 minutes for district and 40 minutes for state will be allowed for species identification. Participants will be provided a master list of species to use for this phase of the contest. Each correct species identification will count 5 points. The species may be shown as photographs, live specimens, or preserved specimens.
- 3. Fish Anatomy Identification (District and State):** This is an individual event where each participant must identify the external and internal anatomy of a fish. This may be done utilizing a diagram or by identifying labels on an actual specimen. This will be conducted as an Identification item on the scan form. See the attached diagram as a reference.

4. **Practicum Tests (State Only):** All materials that are needed will be furnished. Additional practicum tests may be used for future competitions. This year's practicum tests will consist of the following:
- a. **Water Quality Testing:** This is individual event where 30 minutes will be given for the completion of this practicum. Each team member would test a different water sample for water quality parameters such as pH, Alkalinity, Hardness, Nitrate and Nitrite and make recommendations from the analysis.
 - b. **Solution Concentrations:** This is an individual event where 30 minutes will be given for the completion of this practicum. Each participant will calculate appropriate solution concentrations for multiple tanks based on the volume of the system to determine the amount of additive needed. This includes that participants be able to calculate the volume of a tank in cubic inches, convert that to gallons/liters, and therefore determine the amount of additive that is needed to reach the target alkalinity. See attached worksheet for further instructions and all formulas that will be needed.
 - c. **Feed Ratio:** This is an individual event where 30 minutes will be given for the completion of this practicum. Given multiple scenarios about various tanks, each participant will determine the appropriate feeding amount based on a given percentage of total biomass that is to be fed. See attached worksheet for further instructions.

Tiebreakers

If a tie occurs, the following circumstances will be used in order to determine award recipients (For district event, #2-4 will be used):

1. Highest total of practicum scores.
2. Highest total of species identification scores.
3. Highest total of written examination scores.
4. Highest individual score on written examination.

Event Rules

1. The team will consist of four members. The team's total score will be based on the sum of the points earned by the top 3 participants on the team.
2. All materials needed for this event will be furnished.
3. If a cell phone is seen or heard in the possession of a competitor, that individual student will be disqualified from competition and receive a score of zero.
4. Competitors must enter their name on the scorecard, or they will receive a score of zero. Judges will not attempt to figure out who the card belongs to.
5. All individual safety equipment will be furnished by the participant for the state event. Safety glasses and closed toe shoes will be required at all times during the water testing phase. Participants who are violating general safety rules will be dismissed from the event.

Fish Anatomy

Water Quality Testing

Students will use the LaMotte Freshwater Aquaculture Test Kit to determine water quality from a variety of different sources. Eight critical test factors can be efficiently and accurately determined on-site by students, including alkalinity, ammonia nitrogen, carbon dioxide, chloride, nitrite nitrogen, pH, temperature, and total hardness. Lid label instructions will be provided. Students must be familiar with how to use, read and determine ways to adjust water quality parameters when needed.

Solution Concentrations

Formulas for Finding Volume:

Rectangular Tank: Length x Width x Height = Volume

Hexagonal Tank: (Base x Height x Length x .5) x 6 = Volume *Height is half of the tanks width

Octagonal Tank: (Base x Height x Length x .5) x 8 = Volume *Height is half of the tanks width

Cylindrical Tank: $\pi \times \text{Radius}^2 \times \text{Height} = \text{Volume}$ *Radius is half of the tanks width

Oval Tank: $(\pi \times \text{WidthA} \times \text{WidthB} \times \text{Height}) / 4 = \text{Volume}$ *A = Minor Axis B = Major Axis

*if all measurements are made in inches the volume will be in cubic inches

Conversions Needed:

231 in³ = 1 gallon

1 gallon = 3.8 liters

1 ppm = 1 mg/L

***all formulas and conversions must be memorized and will NOT be given**

***all calculations MUST be rounded to the nearest tenth**

Example Problem:

If a rectangular tank that measures 24 inch x 18 inch x 16 inch has an alkalinity of 50 ppm and a desired alkalinity of 85 ppm, what is the amount of sodium bicarbonate that needs to be added to reach the target alkalinity?

$(24 \text{ in} \times 18 \text{ in} \times 16 \text{ in}) = 6,912 \text{ in}^3$

$6,912 \text{ in}^3 \div 231 \text{ in}^3/\text{gallon} = 29.9 \text{ gallons}$

$29.9 \text{ gallons} \times 3.8 \text{ L} = 113.6 \text{ liters}$

$85 \text{ ppm} - 50 \text{ ppm} = 35 \text{ ppm}$

35 ppm = 35 mg/L

113.6 L x 35 mg/L = **3,976 mg** of sodium bicarbonate is needed to reach the target alkalinity

Feed Ratio

DIRECTIONS:

In this activity, you will weigh fish and determine biomass in order to formulate a proper feed ration. Because feed is a high cost, it is important not to overfeed. Fish have a tendency to gorge themselves when overfed, causing a fatty fish and contributing to off flavors when eaten. Additionally, underfeeding will increase the length of production time. Care must be taken to produce a quality product with minimum costs.

STEPS:

STEP 1 - Fill a one-gallon bucket about halfway with water and weigh it using the scales provided.

STEP 2 - Carefully remove 3 fish from a tank and place them in the bucket and record the new weight.

STEP 3 - Return fish to water.

STEP 4 - Plug numbers into formula and determine how much feed is needed per day.

FORMULA TO USE:

$$.025 \times ((A + B + C) \div 3) \times N = F$$

*.025 = the percentage of biomass we feed (2.5%).

*A + B + C = each individual weight of the fish.

*Divide A+B+C by 3 (number of fish weighed) for the average weight per fish in the tank.

*N = the total number of fish in the tank.

*F = the amount of feed needed per day.

NOTE: This formula must be memorized prior to event.

*Students can also be asked to calculate growth rates as well as grow out periods in relation to the feed ratio and weights of fish.

Species Identification List

	Common Name	Scientific Name	Fresh Water	Brackish Water	Salt Water
1	Common Carp	<i>Cyprinus carpio</i>	X		
2	Grass Carp	<i>Ctenopharyngodon idellus</i>	X		
3	Silver Carp	<i>Hypophthalmichthys molitrix</i>	X		
4	Golden Shiner	<i>Notemigonus crysoleucas</i>	X		
5	Channel Catfish	<i>Ictalurus punctatus</i>	X		
6	Blue Catfish	<i>Ictalurus furcatus</i>	X		
7	Flathead Catfish	<i>Pylodictis olivaris</i>	X		
8	Brown Bullhead Catfish	<i>Ameiurus nebulosus</i>	X		
9	Spotted Bullhead Catfish	<i>Ameiurus serracanthus</i>	X		
10	Alligator Gar	<i>Atractosteus spatula</i>	X		
11	Longnose Gar	<i>Lepisosteus osseus</i>	X
