

2024 Discussion Meet Questions

1. Production agriculture requires a lot of capital. Young farmers and ranchers face challenges gaining access to the capital they need to start or grow their operations. What tools are currently available, and what new programs could be introduced, to help young people access financial resources—and make sound financial decisions—to run their farms and ranches?
2. Working with elected officials, in all levels of government, is critical to advancing public policy that supports farmers and ranchers. How can agencies like Farm Bureau help elected leaders better understand the challenges of the agriculture sector and the importance of supporting the financial viability of America's family farms and ranches?
3. What is sustainable agriculture and how can agriculturalists and policy makers help farmers and ranchers access market-based solutions that advance sustainability goals without restricting their ability to stock America's pantries, help feed a growing population and maintain farm profitability?
4. Farmers and ranchers across the country are diverse in not only the goods they produce, but also in the ways they raise and market them. How can our organization further welcome and engage diverse agricultural communities and cultivate dynamic future leaders?
5. Agriculture uses water for everything from growing crops, raising livestock, and moving products to and from farms and ranches. Water issues are often hotly debated, are unique to each region and can pose significant challenges to growers. How can business leaders, policymakers and consumers help address water management challenges and seek long term solutions for farmers and ranchers?
