Alabama State Department of Education, Dr. Eric Mackey, State Superintendent of Education

The Alabama State Board of Education and the Alabama State Department of Education do not discriminate on the basis of race, color, disability, sex, religion, national origin, or age in its programs, activities, or employment and provide equal access to the Boy Scouts and other designated youth groups. The following person is responsible for handling inquiries regarding the non-discrimination policies: Title IX Coordinator, Alabama State Department of Education, P.O. Box 302101, Montgomery, AL 36130-2101, telephone (334) 242-8165.

Updated September 2024

Agriscience Fair

Introduction

The Alabama FFA Agriscience Fair provides recognition to students engaged in outstanding experimental immersion SAEs. Students in this award area use scientific principles and emerging technologies to solve complex problems related to agriculture, food, and natural resource systems. This program also gives students a chance to demonstrate and display agriscience projects that are extensions of their agriscience courses. The agriscience fair is for students in grades 7-12. Participation begins at the local level and progresses to state and national levels. Areas of participation closely mirror the National Agriculture, Food and Natural Resources Career Cluster Content Standards.

Selecting a Topic

The research immersion SAE includes analytical, experimental, and invention types. During analytical SAEs, students explore agricultural phenomena they become interested in during their agriscience class or foundational SAEs. Experimental SAEs allow students to apply the scientific process to explore questions that might have been answered during their analytical SAE. The agriscience fair is designed to award outstanding experimental SAEs. Outstanding

experimental SAEs are those that ask a question that cannot be answered by a quick internet search, apply the scientific method to answer the question, and come up with practical recommendations that have meaningful impact on those involved in the agriculture, food, and natural resource industries.

Developing a quality agriscience project includes and requires:

- Focusing on an important agricultural issue, question or principle.
- · Specific research objectives.
- Using a number of steps.
- Following a scientific process to collect and analyze data.
- Student commitment to a moderate or substantial amount of time.
- Teacher supervision.

Pathway Descriptions

Student researcher(s) can compete in the national agriscience fair in one of six pathways:

- Animal Systems.
- Environmental Service/Natural Resource Systems.
- Food Products and Processing Systems.
- Plant Systems.
- Power, Structural and Technical Systems.
- · Social Science.

Pathways are determined by which agricultural system would be most interested in the practical recommendations of the experiment. For instance, if a student tests the width of buffer strips adjacent to corn fields to filter out sediments, the project would be in Environmental Service/Natural Resource Systems because the largest impacts would be on the stream system and aquatic organisms living in the stream. Biotechnology Systems is the study of using data and scientific techniques to solve problems concerning living organisms with an emphasis on applications to agriculture, food and natural resource systems. Because of this, biotechnology research is incorporated into all pathways listed depending on the study conducted. Biotechnology Systems is not its own pathway.

For National FFA Agriscience Fair Rules or References to the National Agriscience Fair Document visit https://www.ffa.org/SiteCollectionDocuments/asf_2017_2021_agriscience_fair_handbook.pdf#search=Agriscience%20Fair

Animal Systems (AS)

The study of animal systems, including life processes, health, nutrition, genetics, management and processing, through the study of small animals, aquaculture, livestock, dairy, horses and/or poultry.

Examples

- Compare nutrient levels on animal growth
- Research new disease control mechanisms
- Effects of estrous synchronization on ovulation
- Compare effects of thawing temperatures on livestock semen
- Effects of growth hormone on meat/milk production

Environmental Services/Natural Resource Systems (ENR)

- Environmental Service Systems: The study of systems, instruments and technology used to monitor and minimize the impact of human activity on environmental systems.
- Natural Resource Systems: The study of the management, protection, enhancement and improvement of soil, water, wildlife, forests and air as natural resources.
- ENR research involves only non-invasive and non-intrusive methods that do not negatively affect a vertebrate animal's health or well-being. Studies that are designed or anticipated to cause vertebrate animal death are prohibited.

Examples

- Effect of agricultural chemicals on water quality
- Effects of cropping practices on wildlife populations
- Compare water movements through different soil types

Food Products and Processing Systems (FPP)

The study of product development, quality assurance, food safety, production, regulation and compliance and food service within the food science industry.

Examples

- Effects of packaging techniques on food spoilage rates
- Resistance of organic fruits to common diseases
- Determining if varieties of sweet corn have different chemical energy
- Control of molds on bakery products
- Effects of the amount of sucrose used in baked goods
- Use of a triangle test in sensory science

Plant Systems (PS)

The study of plant life cycles, classifications, functions, structures, reproduction, media and nutrients, as well as growth and cultural practices, through the study of crops, turf grass, trees and shrubs and/or ornamental plants.

Examples

- Compare the rates of transpiration of plants in different locations in a landscape
- Effects of heavy metals such as cadmium on the growth rate of plants
- Compare GMO and conventional seed/plant growth under various conditions
- Effects of lunar climate and soil condition on plant growth
- · Compare plant growth of hydroponics and conventional methods

Power, Structural and Technical Systems (PST)

The study of agricultural equipment, power systems, alternative fuel sources and precision technology, as well as woodworking, metalworking, welding and project planning for agricultural structures.

Examples

- · Compare the energy output of alternative fuel sources to traditional forms
- Create minimum energy use structures
- Compare properties of various alternative insulation products
- Examining the efficiency, the configurations of ventilation systems in a swine facility

Social Science (SS)

The study of agricultural areas including agricultural education, agribusiness, agricultural communication, agricultural

leadership and sales in agriculture, food and natural resources.

Examples

- Investigate perceptions of community members toward alternative agricultural practices
- Determine the impact of local/state/national safety programs upon accident rates in agricultural/natural resource occupations
- Comparison of profitability of various agricultural/natural resource practices
- Investigate the impact of significant historical figures on a local community
- Determine the economic effects of local/state/national legislation impacting agricultural/natural resources
- Consumer confidence and understanding of food labels
- Economic effect of employment rate and meat consumption

ELIGIBILITY

<u>Membership</u>

Each participant must be a current dues paying FFA member in good standing with the local chapter, state FFA association and National FFA Organization during the school year in which the participant qualified to participate at the national level.

The participant, at the time of their selection as a national participant, must be

- An FFA member in grades 7–12 during the school year in which the participant qualified to participate at the national level. A graduating senior is considered eligible to compete at the state and national level up to and including their first national convention following graduation.
- Enrolled in at least one agricultural education course during the school year in which the participant qualified to participate at the national level and/or follow a planned course of study. Either course must include a supervised agricultural experience program, the objective of which is preparation for an agricultural career.

Each member and/or team may enter only one project. Exhibited projects and written reports will be the result of the student's own efforts. A team is a maximum of two members working cooperatively on the same project. Teams can be made up of two students in different grades but will compete in the division in which the older participant would qualify.

If a student moves to a different chapter or a different state once they have qualified as a state representative in the agriscience fair, that student may be allowed to compete in the national event with the school they qualified with during the qualifying year. Team members must be from the same chapter at the time of qualification.

Once a student places in the top three of a division and category/pathway, they can no longer compete in that division and category/pathway regardless of the research subject.

Example: If a student win Animal Systems Division I as a 7th grader, they can no longer participate in that Division. They can compete in Animal Systems Division II as an 8th grader or even Animal Systems Division 5 as an 11th grader.

- Students who wish to continue research on the same topic or who have won a division and category/pathway are encouraged to seek additional recognition using the agriscience proficiency award or star award.
- If a student wishes to continue with the same research, at least one variable must be changed, and the data must be from the current year. For more information consult the Extension of Agriscience Fair portion of this handbook.
- Students may compete in another agriscience research category/pathway within the agriscience fair.
- Students may not participate in more than one category/pathway and division of the agriscience fair each year.

DIVISIONS

The National FFA Constitution provides flexibility to meet the needs of all students. Competition is open to all FFA members in grades 7–12. There are six divisions:

- Division 1 individual member in grades 7 and 8.
- Division 2 team of two members in grades 7 and 8.
- Division 3 individual member in grades 9 and 10.
- Division 4 team of two members in grades 9 and 10.
- Division 5 individual member in grades 11 and 12.
- Division 6 team of two members in grades 11 and 12.

Grade is determined by the grade level of the member at the time of qualification at the state level. If a team is composed of two members that span two divisions, the team must compete in the division in which the oldest student qualifies. For example, a team of two members in grades 10 and 11 must compete in Division 6. State FFA associations with qualifying competitions may have up to 36 entries, one in each pathway and each division. For example, an association may have an entry in Plant Systems in Division 1, 2, 3, 4, 5 and 6. State FFA associations may not have more than one entry in a pathway/division.

National Qualifiers

National Qualifiers must be certified by the state. State Associations with qualifying competitions may submit up to 36 National Qualifiers, one in each pathway and each division. State FFA associations may not have more than one entry in a pathway/division.

RULES

If there are any questions regarding policies and procedures, contact the National FFA Agriscience Fair program specialist prior to beginning the research: agriscience@ffa.org.

General

- 1. All studies not meeting the criteria of the National FFA Agriscience Fair, but are otherwise permissible, must be conducted in a Regulated Research Institution (RRI). A Regulated Research Institution is defined as a professional research/teaching institution that is regularly inspected by the USDA and is licensed to use animals covered by the Animal Welfare Act and may also be subject to U.S. Public Health Service Policy. Also included are federal laboratories such as National Institutes of Health and Centers for Disease Control. In addition, pharmaceutical and biotechnology companies and research institutions that utilize research animals that are not covered by the Animal Welfare Act but have been an operational Institutional Animal Care and Use Committee and are in compliance with U.S. federal laws are included in this definition. In these studies, proper documentation must be provided, and the project must be reviewed by the National FFA Organization prior to experimentation.
- 2. A research project may be part of a larger study performed by professional scientists, but the project presented by the student researcher(s) must be only their own portion of the complete study.
- 3. Data may not be added to the research project after state-level selection. Projects may not have more than one year of data included. See "Extension of Agriscience Fair Projects" for additional information about extension projects.

Human Vertebrate

The following policies will govern the use of human beings in agriscience fair research projects:

- 1. No projects involving human cultures of any type (mouth, throat, skin or otherwise) are allowed. However, tissue cultures purchased from reputable biological supply houses or research facilities are suitable for the student researcher(s)' use. Researchers should not use animals (including insects, birds, fish etc.) to represent human tissue. Research in health systems related to humans is beyond the scope of the agriscience fair.
- 2. Projects that involve taste, color, texture or any other choice are allowed but are limited to preference only. Quantities of normal food and non-alcoholic beverages are limited to normal serving amounts or less. No project may use drugs, food or beverages in order to measure their effect on a person.

- 3. The only human blood that may be used is that which is either obtained through a blood bank, hospital or laboratory. No blood may be drawn by any person or from any person specifically for an agriscience project. This rule does not preclude student researcher(s) making use of the data collected from blood tests not made exclusively for an agriscience project.
- 4. Psychological, educational and opinion studies are allowed. Projects that involve learning, ESP, motivation, hearing and vision are also permitted (examples might include surveys, questionnaires, tests, etc.).
- 5. Data/record review studies in which the data is taken from preexisting data sets that are publicly available and/or published and do not involve any interaction with humans or the collection of any data from a human participant for the purpose of the research project are allowed.
- 6. No project will be allowed that is in violation of these rules. No person may perform any experiment for student researcher(s) that violates any of the rules.

Non-Human Vertebrate

The following policies will govern the use of non-human vertebrates in agriscience fair research projects:

- 1. The use of vertebrate animals in agriscience projects is allowable under the conditions and rules below. Vertebrate animals are defined as
 - a. Live, nonhuman vertebrate mammalian embryos or fetuses.
 - b. Tadpoles.
 - c. Bird and reptile eggs within three days (72 hours) of hatching.
 - d. All other non-human vertebrates (including fish) at hatching or birth.
- 2. Vertebrate animal studies may be conducted at a home, school, farm, ranch, in the field, etc. This includes:
 - a. Studies of animals in their natural environment.
 - b. Studies of animals in zoological parks.
 - c. Studies of livestock that use standard agricultural practices.
 - d. Studies of fish that use standard aquaculture practices.
- 3. Intrusive techniques used cannot exceed momentary pain and must comply with commonly accepted agriculture and livestock management procedures.
 - a. Student researcher(s) are prohibited from designing or participating in an experiment associated with the following types of studies on vertebrate animals:
 - b. Induced toxicity studies with known toxic substances that could cause pain, distress, or death, including but not limited to alcohol, acid rain, harmful chemicals, or heavy metals.
 - c. Behavioral experiments using conditioning with aversive stimuli, mother/infant separation, or induced helplessness.
 - d. Studies of pain.
 - e. Predator/vertebrate prey experiments.
- 4. Food and water cannot be used or withheld for more than 24 hours for maze running and other learning or conditioning activities.

- 5. The student researcher(s) and advisor have the responsibility to see that animals are properly cared for in a well-ventilated, lighted and warm location with adequate food, water and sanitary conditions. Care must be taken to see that organisms are properly cared for during weekends and vacation periods.
- 6. Livestock or fish raised for food using standard agricultural/aquacultural production practices may be euthanized by a qualified adult for carcass evaluation.
- 7. No vertebrate animal deaths due to the experimental procedures, including hunting or harvesting animals are permitted in any group or subgroup.
 - a. Studies that are designed or anticipated to cause vertebrate animal death are prohibited.
 - b. Any death that occurs must be investigated by a veterinarian or another professional qualified to determine if the cause of death was incidental or due to the experimental procedures. The project must be suspended until the cause is determined and then the results must be documented in writing.
 - c. If death was the result of the experimental procedure, the study must be terminated, and the study will not qualify for the National FFA Agriscience Fair.
- 8. Projects that involve behavioral studies or newly hatched chickens or other birds will be allowed, provided no change has been made in the normal incubation and hatching of the organism and all vertebrate rules are followed.

Hazardous Material

- 1. Material Safety Data Sheets (MSD Sheets) are required and must be included for all substances other than Water (H2O) and Table Salt (NaCl).
- 2. All Hazardous substances used in the current year's research must be listed in the Hazardous Materials Form of the application.

Skills, Competencies and Knowledge

This section of the application is linked to the <u>Agriculture, Food and Natural Resources Standards</u> (AFNR Standards) established by the <u>National Council for Agricultural Education</u>. This section of the application requires applicants to show how the included project meets AFNR Standards.

The application provides the opportunity to select 5 different indicators from the primary pathway you selected.

1. A. Select up to 5 different primary pathway performance indicators you have gained skills, competencies, or knowledge in through your project. – This table in the application is controlled by the primary pathway selected on the application's Basic Setup page. If you decide the offered indicators do not match your project well, consider returning to the Basic Setup page and choosing a more appropriate primary pathway.

If you find that no AFNR Indicators match your project well, you should consider whether your project is actually within any agriculture, food or natural resource pathway.

a) **AFNR Performance Indicator from Primary Pathway** – Select up to five different indicators which match your project from the drop-down menus.

b) Specifically describe the activities performed to learn or demonstrate the performance indicator selected. – Concisely and clearly explain what you did that directly and clearly relates to the selected indicator. Describe how the activity contributed to the success of the included project and how it demonstrates performing the selected indicator.

TIP: The written description needs to match the selected indicator directly and closely.

TIP: Do not be repetitive. Do not select the same indicator more than once and do not describe the same activity more than once. The application provides the opportunity to select 5 different indicators from the primary pathway you selected.

Checklist

The application includes an automated checklist to help find errors or information missing from the application. It will not find every possible error. A clean checklist does not guarantee that the application won't be penalized.

- 1. **NOT MET, MISSING or ERROR** The application cannot be submitted for national-level competition if there are any "Not Met," "Missing" or "Error" items in red font on the checklist. This signifies incorrect or missing information that may prevent the application from qualifying.
- 2. **REVIEW** A checklist item that says "Review" in red font is not an error and may be fine. The checklist is simply calling attention to information in the application that should be double-checked. Applicants are advised to make sure the information the item points to is clearly explained in the application.
- **3. MET –** Ideally, all items on the checklist should say "Met" in green font. This does not mean the application is perfect and without errors. It does mean everything the computer can automatically check for has been cleared.

TIP: Computers are not as smart as people. The computer can check whether or not a box contains text or numbers; it can't determine if the text or numbers are correct information. A clean checklist does not guarantee that the application has no errors.

Electronic Signatures

Carefully read the signature statements before electronically signing the application. Commitments are being made for all signatories — know what you are signing.

- 1. Student Approval This is the signature of the applicant. Information can only be entered when the applicant is correctly signed into their electronic account.
- 2. Advisor Approval This is the signature of the supervising agricultural education teacher/FFA advisor. The advisor's signature is required to verify and certify the application. The advisor must be signed into their electronic account to enter information here.
- 3. **Request for Parent/Guardian Approval** This area is for the parent/guardian to certify the information in the application and give permission for information to be used.
 - a) Enter the email address of the parent/guardian whose signature is being requested and click the "Request Signature" button. The application will send an email to that address.
 - i) The parent/guardian must open the email message, click the link, and follow the instructions to sign the application electronically.

- b) **Adult Sponsor** This signature is for the adult sponsor or supervisor to verify that the application information is accurate.
 - i) Enter the email address of the "Adult Sponsor" whose signature is being requested and click the "Request Signature" button. The application will send an email to that address.
 - ii) The Adult Sponsor must open the email message, click the link and follow the instructions to sign the application electronically.

Save Your Application

Judges do not access the live online application. The live application can be constantly accessed by applicants and is ever-changing. The document that judges review is the specific, time-stamped PDF version of the application that is generated and submitted. If no PDF of the application is generated by completing the following steps, there is nothing to be submitted or judged.

1. **Complete/Save Your App –** The button labeled "Complete/Save Your App" is how application PDF versions are generated (created). This generated PDF is what is submitted and judged. As versions are generated, they are listed in the table on the screen. Which version to submit is chosen by the applicant.

2. **Get PDF** – To view the generated application, click the "Get PDF" button next to each listed version. What you see when you open this file is what is being submitted for the judges to review, possibly minus some pages depending on your state (see details below in the Application Submission and Judging sections).

Application Submission

Each state FFA association has its specific directions and deadlines for submitting applications for local/state judging. Consult with the chapter FFA advisor or state FFA staff for these instructions.

Only state staff may certify and submit applications for national judging. Instructions for state staff to submit applications online are provided yearly by national FFA staff and available in the State Staff Dashboard on FFA.org.

Each state association may submit a single application for national-level competition in each award area available at the national level each year.

EXTENSION OF AGRISCIENCE FAIR PROJECTS

The completion of a research project can generate additional research questions that are worthy of investigation. Participants will have the opportunity to conduct this additional research as long as the current year's project could not have been done without what was learned from the past year's research. This project would now be considered an extension project for competition. If participants have competed at the National Agriscience Fair in the category/pathway they are competing in (regardless of the division), they must complete a project extension, and they should complete original work.

- 1. Student researcher(s) may use findings of previous research to formulate their research hypothesis; however, the student researcher(s) will be evaluated on research they have conducted in the twelve months prior to June 15 annually.
- 2. Previous research and information should only be included in the Literature Review/Other's Work by citing the student researcher(s)' previous work in the same fashion as other scholarly sources. Additionally,

student researcher(s)' work could be used to inform discussions and conclusions indirectly (not specifically listed). Judging will be based on the current year of research.

- 3. Extension projects should be unique in question and manuscript development. If an extension is filed, the introduction, review of literature, methods, results, and conclusions should not be copied and pasted into the new manuscript. Exceptions to this are methods that follow the same step-by-step procedures. Copying and pasting large sections of text from year to year will be considered plagiarism and will be disqualified.
- 4. The project must document that the additional research is an expansion based on the findings of prior work (e.g., testing a new variable or new line of investigation, etc.) Repetition of previous experiments with the same methodology and research question or increasing sample size are examples of unacceptable extensions and will be ranked as a participant at the national pregualifying judging event.
- 5. The project display must reflect the current year's work only. The project title displayed in the finalist's booth should not mention years (e.g., "Year Two of an Ongoing Study").
- 6. Longitudinal studies are permitted under the following conditions:
 - a. The study is a multi-year study testing or documenting the same variables in which time is a critical variable (e.g., effect of high rain or drought on soil in a given basin; return of flora and fauna in a burned area over time).
 - b. Each consecutive year must demonstrate time-based change.
 - c. The display board must be based on collective past data and its comparison to the current year data set. No raw data from previous years may be displayed.
- 7. All extension projects must be reviewed and approved each year, and forms must be completed for each year.
- 8. Successive year projects must indicate change or growth in the project from the previous year(s) in the logbooks and complete the continuation form in the application.
- 9. To complete an extension, students should indicate on the cover page of the application that the project is an extension. Once the student has selected "yes," a link will appear in the blue box on the left-hand side of the application. Complete this form to file an extension.

NOTE: For an extension project to be eligible for competition in the agriscience fair, the project extension form in the online application must be completed and will include the abstract for all other prior years. The documentation should be clearly labeled in the upper right-hand corner with the year (i.e., 2018–2019). Please retain all prior years' paperwork in case event officials request additional documentation.

Multiple Research Projects from a Chapter

If more than one agriscience project is entered from the same chapter and/or school, then projects must differ in

- Research hypotheses (questions or objectives).
- Findings related to the research hypothesis (questions or objectives).
- Conclusions.
- · Recommendations.
- Student researcher(s) (each student researcher may only participate in one project).

Each of the published authors must have made a unique and substantial contribution to the research endeavor. It is standard that peripheral contributions be acknowledged (i.e., the student researchers would like to thank Mrs. Smith's Seventh Period Animal Science Class for their assistance in...).

Disqualification

A project will be disqualified if:

- 1. Teams or participants arrive after the designated interview time.
- 2. Any assistance is given to a team or participant from any source other than the Agriscience Fair officials or assistants once judging has begun.
- 3. Agriscience Fair officials stops any participants for manners they deem to be hazardous to themselves or others. Such removal will constitute immediate disqualification.
- 4. The participant does not complete the event they start, unless prior permission from the event officials has been obtained.
- 5. Participants access and/or utilize personal electronic communication devices during the entire course of the event. Participants who access personal electronic communication devices without prior approval will be disqualified (examples include iPads, tablets, computers, cell phones, WiFi devices, etc.).
- 6. An advisor, coach, parent or fellow chapter member is in the interview area once judging officially begins. Any advisor, coach, parent or fellow chapter member found in the interview area may disqualify their participant.
- 7. A student substitution is made. See the "Interview" section of this handbook for more information.
- 8. The participant fails to meet any rules or participation guidelines set forth in this handbook.
- 9. Participants commits plagiarism.
- 10. Participants conducts unethical research.
- 11. The student(s) have previously placed in the top three of a division and category/pathway at the national level and competes again in the same division and category/pathway.
- 12. Participants alter the application and/or written report template.

PROFESSIONAL INTEGRITY

FFA members participating in national FFA programs and events understand and agree that all work must result from their own effort and ability, created, and completed alone (except for partner or chapter applications). When outside sources (direct quotes or phrases, specific dates, figures, or other materials) are used for a project, document, or application, the required reference citation must be completed according to the rules specified by the applicable handbook.

While participating in National FFA programs, FFA members are prohibited from:

- Plagiarizing
- Violating copyright
- Cheating
- Falsifying information
- Using another person's results or thoughts as their own, even with this person's permission. This includes work done by a family member or a mentor.
- Using information or data obtained from the internet without proper citation.

Any attempt to gain an unfair advantage will not be tolerated. Non-compliance represents plagiarism and will automatically disqualify a member.

Use of Artificial Intelligence (AI) for State and National Events

Artificial intelligence (AI) refers to computer systems capable of performing complex tasks that historically only a human could do, such as reasoning, making decisions, or solving problems. As AI continues to evolve, it can be a tremendous tool to help companies, organizations and individuals enhance their productivity and work. Therefore, the National FFA Organization allows the use of AI tools. FFA members may use AI tools, such as ChatGPT, Gemini, and CoPilot, to assist them in their learning.

Appropriate uses of AI may include:

- generating ideas for any FFA-related assignments, projects, contests and award applications
- checking facts of a phenomenon
- · checking for and correcting grammatical errors in a paper written by a member

Code of Conduct

FFA members participating in National FFA programs understand and agree to abide by the <u>National FFA</u> Code of Conduct.

Required Forms

As a part of the national competition application process, the application and written report must be approved online by July 1. This date serves as the national agriscience fair application and certification deadline. The required forms are located in the Application Center on FFA.org.

Accessibility for All Students

All accommodation requests must be submitted 30 days prior to the start of the event and are outlined on ffa.org.

Recognition

<u>Chapter level:</u> Winners may be selected annually in each FFA chapter. The winner can represent any of the agriscience pathway areas (based on state rules for competition).

<u>State level:</u> Winners from each division in all pathways may be selected annually in each of the chartered state FFA associations. Each of those winners' applications and reports should be sent to the National FFA Center for prequalifying judging. See the "Agriscience Fair Prequalifying" section of this handbook for more information.

<u>National level</u>: Selected participants from each state may be forwarded for national competition. A maximum of 10 applicants in each pathway and division will be considered national finalists and invited to compete in the National FFA Agriscience Fair interview to be held virtually each September. All national finalists are expected to participate in a scientific career exploration, networking, and immersion experience at the National FFA Convention & Expo. During this time, students will present their research and engage/network with universities and sponsors about their research. The orientation packet will release more details, including project submission and schedules, mid-year.

AGRISCIENCE FAIR COMPONENTS

Written Report

The full written report and application must be submitted by the Alabama FFA Association by April 1. As developing student researchers, the expectations for the written report are slightly different for Divisions 1 and 2 (seventh- and eighth-grade students) compared to Divisions 3, 4, 5 and 6.

The purpose of the rubric for Divisions 1 and 2 is to introduce young student researchers to the process of scholarly thinking. As the student researcher ages, skills grow and advance to utilize the rubric for Divisions 3 to 6 (grades 9 to 12). See Prequalifying Rubric: Divisions 1–2 and Prequalifying Rubric: Divisions 3–6 for additional information.

FORMAT OF REPORT

The report should be printed on 8 ½ x 11-inch white paper. The report will have 1-inch margins. Font size must be 12 using Arial, Courier or Times New Roman font. The written report template is required and is available on FFA.org/agrisciencefair by division.

Divisions 3–6 (Grades 9–12) Divisions 1-2 (Grades 7-8) See Summary area of the Written Report section of **ABSTRACT** this handbook. A brief summary of the paper, which concisely describes the purpose, methods, results and conclusions. The abstract may include potential research applications or future research. The abstract should not contain cited references. It should be no longer than one page and in paragraph form. Because this is the first page of the project report, it will be where the reader forms an opinion on the study. In the abstract, arrange the points in this order: Purpose. 2. Procedure. Results. Conclusions. This section would include methods, primary results/effects of major treatments and main conclusions. Do not include discussion, citations and footnotes, or references to tables and figures.

IMPORTANCE

The importance answers the question, "Why was the work done?" Provide an explanation of

- Why the research topic is important to the agriculture industry.
- What problem the investigation attempts to solve.

Each point should be addressed in a paragraph for a minimum of two paragraphs in the importance section.

INTRODUCTION

The introduction answers the question, "Why was the work done?" It provides background on the subject in several paragraphs. The introduction should clearly state the problem that justifies conducting the research, the purpose of the research, its impact on agriculture, the findings of earlier work, and the general approach and objectives. You must cite sources for statements that are not common knowledge. The last paragraph of the introduction includes the objectives of the study.

Divisions 1-2 (Grades 7-8)

Divisions 3-6 (Grades 9-12)

OTHER'S WORK

The other's work section details the information that currently exists concerning the research topic. What other information did the student researcher(s) read before conducting the project? What information did student researcher(s) look up during the investigation? Reference information regarding where the publication was found should be listed, then a brief summary should be written by the student researcher(s) for each publication. Publications could include articles about similar studies, similar research methods, history of the research area and any other items that support the current knowledge base for the research topic.

LITERATURE REVIEW

The literature review should detail what information currently exists concerning the research project. Information in the review should be written in APA style and should include publications used for the research. Publications cited could include articles about similar studies, similar research methods, history of the research area, and any other items that support the current knowledge base for the research topic and how the project might complement existing information.

MATERIALS AND METHODS

This section enables others to reproduce the results by duplicating the study. Write in first person, encompass all materials required and explain the study design by sharing the technical and experimental procedures used. If used, any statistical procedures are included here. This section should be a narrative rather than a list of steps on how to do the process.

MATERIALS AND METHODS

A well-written materials and methods section enables others to reproduce the results by replicating the study. Write in past tense, third person, encompass all materials required, state the hypothesis/research questions and explain the study design by sharing the technical and experimental procedures employed. With fieldwork, describe the study site. Include any statistical procedures employed. This section should be a narrative rather than a list of steps on how to do the process.

HYPOTHESIS/ANTICIPATED RESULTS

The student researcher(s) state the hypothesis and/or anticipated results. What are the expected results of the

RESULTS

This section is a summary of the results, even if they are not what was hypothesized. Do not include discussion or conclusions about the data. Tell the reader exactly what was discovered and what patterns, trends or relationships were observed. Decide on the most meaningful way to present the data (tables, figures), and refer to them in the text. Data should be able to stand alone in the form of tables and/or figures. Data should not be added after the state level selection as it may alter the discussion and conclusions.

RESULTS

This section is a summary of the results, even if they are not what was hypothesized. Do not include discussion or conclusions about the data. Tell the reader exactly what was discovered and what patterns, trends or relationships were observed. Decide on the most meaningful way to present the data (tables, figures), and refer to them in the text. Data should be able to stand alone in the form of tables and/or figures. Data should not be added after the state level selection as it may alter the discussion and conclusions.

Divisions 1-2 (Grades 7-8)

Divisions 3-6 (Grades 9-12)

DISCUSSION

In this section, the student researcher(s) should include information about the meaning of the results, how the results relate to the Other's Work section and what impact the study has on the agriculture industry.

DISCUSSION AND CONCLUSIONS

In this section, draw conclusions from the results of the study and relate them to the original hypothesis. It is helpful to briefly recap the results and use them as a foundation for the conclusions. If the results were not what was expected, take this opportunity to explain why. Give details about the results and observations by elaborating on the mechanisms behind what happened. Tie the study in with the literature, but do not hesitate to offer sound reasoning of your own. Discussion should refer to facts and figures in the results section and provide recommendations for practice and future research. Discussion and conclusions should also address the impact the research has on the agriculture industry.

CONCLUSIONS

In the conclusion, the student researcher(s) should share recommendations on what should be done or what should change as a result of the research. It is helpful to briefly recap the results and use them as a foundation for the conclusions. If the results were not what was expected, take this opportunity to explain why. The student researcher(s) should share what the next steps are to continue the study.

See Other's Work area of the Written Report section of this handbook.

REFERENCES

Only significant, published and relevant sources accessible through a library or an information system should be included. All citations in the text must be included in the reference section. When information or facts are used that are not common knowledge, give credit to the source of that information by citing a reference. Use the APA style recognized citation system throughout the report.

SUMMARY

The summary should be two to three paragraphs describing the study conducted. Describes why the student researcher(s) chose to conduct the study, why the study is important to the agriculture industry, how the student researcher(s) conducted the study, what the student researcher(s) found by conducting the study and how the results apply within the agriculture industry.

See Abstract area of the Written Report section of this handbook.

ACKNOWLEDGMENTS

Acknowledge anyone who helped in any aspect of the project in this section.

ACKNOWLEDGMENTS

Acknowledge anyone who helped in any aspect of the project in this section.

Divisions 1-2 (Grades 7-8)

Divisions 3-6 (Grades 9-12)

SKILL DEVELOPMENT

The student researcher(s) select five different competencies based on the study conducted. All five competencies must be from the study's primary pathway. The student researcher(s) demonstrate skills that are appropriate for the scope of the project. The project demonstrates the application of skill attainment with a measurable impact on the overall study.

SKILL DEVELOPMENT

The student researcher(s) select five different competencies based on the study conducted. All five competencies must be from the study's primary pathway. The student researcher(s) demonstrate skills that are appropriate for the scope of the project. The project demonstrates the application of skill attainment with a measurable impact on the overall study.

SPELLING/GRAMMAR

The student researcher(s) should use correct spelling, complete sentences and proper grammar throughout the report. APA or MLA-style writing is used throughout the report.

APA STYLE/SPELLING

The student researcher(s) should use correct spelling, complete sentences, proper grammar and appropriate APA-style writing throughout the report.

Framework of Report

Student(s) must use the division-appropriate written report template available on <u>FFA.org/agrisciencefair or</u> the following headings to create a research report. All reports must meet the additional criteria listed in the *Format of Report* section.

Divisions 1-2 (Grades 7-8) Divisions 3-6 (Grades 9-12) Title Page A short title **Project Title** o 50 character or less o Includes student's name(s), chapter, Title Page state, pathway, Division o Project Title Maximum 3 lines/15 words Importance o Why is this topic important to the o Includes student's name(s), chapter, agriculture industry? state, pathway, Division What problem does the investigation **Abstract** solve for agriculture? o No longer than one page Other's work Introduction Materials and Methods Literature Review Hypothesis/Anticipated Results Materials and Methods Results Discussion **Discussions and Conclusions** o What do the results of the study mean? Acknowledgements How are they related to what others References found in the "Other's Work" section? Conclusions Summary Acknowledgements

OFFICIAL DRESS

Participants are expected to observe the National FFA Code of Ethics and the proper use of the FFA jacket during the agriscience fair. (Please reference the latest edition of the Official FFA Manual.) Official dress is highly recommended for the interview and awards presentation and recognition.

SCORESHEETS AND RUBRICS

This section contains scoresheets and rubrics utilized by judges to evaluate written reports and interviews. As developing student researchers, the expectations for the written report are slightly different for Divisions 1 and 2 (grades 7 to 8) compared to Divisions 3 through 6 (grades 9 to 12). Please note that these written reports are evaluated differently.

PREQUALIFYING SCORESHEET FOR STATE: DIVISIONS 1 & 2 (Grades 7-8)

Area		Points possible	Points Earned
Importance	The importance includes a one-paragraph answer for each question that clearly answers: Why is the topic important to the agriculture industry? What problem does the investigation solve for agriculture?	10	
Other's Work	Clearly details what information currently exists concerning the research project. Reference where the information was found (website, book, article, etc.) is listed, then a paragraph written by the student researcher(s) clearly describing the reference and information is provided for each publication used.	15	
Materials and Methods	Clearly written to enable others to replicate the study and results. The section is written in first person and encompasses all materials required. If used, the statistical procedures are included. A narration of the steps taken to complete the experiment is included.	10	
Hypothesis/ Anticipated Results	Student researcher(s) clearly state the hypothesis and/or anticipated results.	5	
Results	The written results of the project are summarized. Trends and relationships are clearly addressed. No conclusions are made in this section. Data that can stand alone in the form of tables and/or figures are included.	20	
Discussion	The discussion includes clear, detailed answers for each question: What do the results of the study mean? How are they related to what others found in the "Other's Work" section?	10	
Conclusions	The conclusion clearly states what should be done and/or changed as a result of the research. Clearly states what the next steps are to continue the research.	5	
Summary	The summary is two to three paragraphs describing the study conducted. Describes why the student researcher(s) chose to conduct the study, why the study is important to the agriculture industry, how the study was conducted, what was found by conducting the study and how the results apply within the agriculture industry.	5	
Acknowledgments	A detailed list or paragraph is included acknowledging anyone who assisted with any aspect of the project and how they helped.	3	
Skills, Competencies and Knowledge	All five competencies from the primary pathway demonstrate skills that are appropriate for the scope of the research project. The project demonstrates the application of skill attainment with a significant measurable impact on the overall project. NOTE: If the selected indicator does not apply to the project detailed in the application, the Skills, Competencies and Knowledge section on the rubric will receive zero (0) points.	15	
Spelling/Grammar	TOTAL SCORE (100 points possible)	2	
	TOTAL GOOKE (100 points possible)		

^{**}Projects must score at least 70 pts to be eligible for State.

PREQUALIFYING SCORESHEET FOR STATE: DIVISIONS 3-6 (Grades 9-12)

Area		Points possible	Points Earned
Abstract	The abstract is brief and concisely describes the purpose, methods, results, and conclusions. The abstract does not include cited references. The abstract is no longer than one page. Arrangement makes the purpose, procedure, results and conclusions clear.	3	
Introduction	Introduction answers the question "Why was the work done?" It clearly states the problem that justifies conducting the research, the purpose of the research, its impact on agriculture, the findings of earlier work and the general approach and objectives.	10	
Literature Review	The literature review details what information currently exists concerning the research project. The information includes materials used in the research and material cited, such as articles about similar studies, similar research methods, history of the research area, and other items that support the current knowledge base for the topic and how the project might complement existing information	10	
Materials and Methods	Clearly written to enable others to replicate the study and results. The section is written in third person, encompasses all materials required, states the hypothesis/research questions, and explains the study design. If used, the statistical procedures are included. A narration of the steps taken to complete the experiment is included.	15	
Results	The written results of the project are summarized. Trends and relationships are clearly addressed. No conclusions are made in this section. Data that can stand alone in the form of tables and/or figures are included.	20	
Discussion and Conclusions	A brief recap of the results is included and shows how they were the foundation of the study. Sound reasoning shows that conclusions are based on results, incorporate previous literature, and relate directly to the hypothesis. The discussion refers to or references facts and figures in the results section and provides recommendations for practice, future research, and the impact on the agriculture industry.	15	
Acknowledgments	A detailed list or paragraph is included acknowledging anyone who assisted with any aspect of the project and how they helped.	3	
References	References contain significant, published and relevant sources.	2	
Skills, Competencies and Knowledge	All five competencies from the primary pathway demonstrate skills that are appropriate for the scope of the research project. The project demonstrates the application of skill attainment with a significant measurable impact on the overall project. NOTE: If the selected indicator does not apply to the project detailed in the application, the Skills, Competencies and Knowledge section on the rubric will receive zero (0) points.	20	
APA Style/Spelling	APA citation style writing is used throughout the written report. No spelling or grammar errors are present.	2	
	TOTAL SCORE (100 points possible)		

^{**}Projects must score at least 70 pts to be eligible for State.

STATE JUDGING:

Projects that earn 70 points on the prequalifying scoresheet will be eligible for State contest at convention. At state the information in their report should be presented on a display and will be scored using the scoring rubrics found below.

SCORING RUBRIC FOR STATE: DIVISIONS 1 & 2 6 (Grades 7-8)

Student researcher(s) do not use complete sentences; excessive spelling or grammar errors present.	10	
		TOTAL	SCORE (100 points possible)		

DISPLAY REQUIREMENTS (SETUP BETWEEN 6:00 – 9:00 p.m. on Tuesday night and 8:00 a.m. – 9:00 am on Wednesday of Convention)

Each exhibit should include information relevant to the study. All projects must have the following information attached to the exhibit:

- Name of agriscience fair participant(s) responsible for developing the project
- Chapter name, state
- Title of category
- Division (1, 2, 3, 4, 5 or 6)

At the Alabama FFA Agriscience Fair, tables will be provided. Failure to meet these requirements will result in disqualification. The display must consist of a stable, free standing display board on the provided table top not to exceed the sizes outlined above. The student researcher(s) may also have the log book and up to five copies of the written report as part of the display. The log book and copies of the written report are optional. No additional props, handouts or electronics are permitted. No tablets, iPads, cell phones or other electronic devices will be permitted. Internet access will not be provided. Posters can be created utilizing Microsoft PowerPoint slide format, however this is not required. Participant(s) are responsible for providing backing for the poster if needed.

Sample Logbook

You must keep careful records of all that you do and all that happens during your project. This should be in the form of a daily diary called a <u>logbook</u>.

Sample Logbook

Date: 1/13/11

Today I checked my plants at 12:30 p.m. I noticed that Group A seems to be growing faster than groups B, C and D. Specifically, plant A₂ seems to be growing the best. The plants in Group A are not just taller, but seem to be greener and healthier. It is interesting to note that the plant with the longest root development is plant C₃. I do not know the reason for this. Here is a chart of my results for today:

Plant	Height in cm.	# of Leaves	Root length in cm.	Observations
Al	5	4	3.1	Has not grown
A2	5.2	5	3.4	Has a new leaf
A3	5.3	4	3.4	Is tallest in the group
Bl	4.9	4	3.1	Has not changed
B2	4.8	4	3.0	Has not shown growth
B 3	4.8	5	2.5	Poor root growth
Cl	5.0	4	2.3	Poor root growth
C2	4.3	5	3.4	Lowest height
C3	4.5	4	4.2	Longest roots
D1	4.3	4	3.2	Lowest height
D2	4.7	4	2.9	Low root growth
D3	4.4	4	2.0	Least root development

- ✓ Notice there are comments and a chart for each entry.
- Developing an outline template for the logbook and photocopying a page for each daily entry can be helpful.
- √ The logbook can be created either in a notebook or as a collection of pages.
- ✓ Use a separate page for each daily entry.
